- "With this tool you can encrypt and decrypt files in any of the supported format (KR-SHA1, KR-Cipher, KR-Blowfish, KR-AES/128, KR-AES/192, KR-AES/256). - You have the possibility to select a filename extension, which will be automatically appended with a.KREI file. - You can perform a encryption by files, by directories or by files and directories. - You can perform a encryption at different levels (e.g. encrypt all files in a directory, encrypt only the files in a directory, encrypt files with a password, etc...). - There is an option to exclude

---

some files from the encryption (e.g. in case of wrong passwords, it's a security enhancement to exclude a known file from the encryption). - The encryption is safe and your data will remain untouched, you will have only a password-protected file." - "KR-Encryption offers a very easy and simple interface, which makes KR-Encryption the right tool for every situation. - You can simply click the Encrypt or Decrypt button. - You can either enter a file name or an directory name. - You can select a filename extension, which will automatically be appended to the file name. - You can select a filename extension, which will be ignored by the file system. - You can also define the encryption and decryption mode, which can be selected via a dropdown box." - You can then enter your password (which is selected randomly for every encrypted file). - You can enter the password, by which you will decrypt your files. - You can define a filename (e.g. as a filename or as a directory name) for the file, which will be saved encrypted. - You can define a filename for the file, which will be ignored by the file system. - You can also select a password, which will be used for the encryption, but will be ignored for the decryption. - You can also choose, if you want to encrypt all files in a directory, which are newer than a certain date (or all files, if
