Popularly known as the Devil's Bible, it contains a comprehensive collection of divinatory information on astrology, numerology and a plethora of other subjects. The Codex Gigas was written in the mid-13th century in Lower Silesia, a region of modern day Poland. Scholars generally believe that it is the work of Johannes Czermak, a German priest who lived in Poland in the mid-13th century. Czermak was highly skilled in the craft of manuscript illuminator, and many believe that he was responsible for the creation of the now famous codex. The book itself is on average 88 cm wide and approximately 50 cm tall. The over-all shape of the book is oval. In addition to the text there are two illustrations, which include an initial letter or symbol known as "The Evil Eye". When it was written, this symbol was very popular among Christians. In fact, it is one of the first recurring symbols in literature. So popular was the symbol that, over time, different artists came up with their own versions of the symbol. Due to this, the "evil eye" had become a very evocative symbol that has endured to the modern day. The "Evil Eye" - The Encyclopedia of Symbols Symbols is a compendium of the most important symbols used by different cultures and religions. The symbol is strongly connected to witchcraft and dark magic, which is why many ancient and modern cultures used the symbol as a means of good luck. In modern times, the "evil eye" has only been used in the west by modern poets and writers. The symbol became so popular that it has been used as a means of bad luck in the far east. The source of the symbol is very old. It is one of the earliest symbols in human history. Hexagrams: The 12 Zodiac Signs. The Hexagram is a familiar symbol used for many of the zodiac signs. Because of the zodiac's concept of a cyclical nature of time, the number of people born during the same time frame would only increase or decrease in multiples of 6, 9 or 12. So, the 12 zodiac signs are all made up of

[PDF] On Jan 1, 2007, Kamil Boldan - Michal Dragoun - Dušan Foltýn - Jindřich Marek - Zdeněk Uhlíř published Codex Gigas - The Devil's Bible. [PDF] Category:Medieval art Category:Illuminated manuscripts of the Czech Republic Category:1501 books Category:Satanism in Europe Category:Bible translations into Czech Category:Rudolf II, Holy Roman Emperor, we divided the data into two groups based on the presence of AF in the MSLCT: AF+ group (56 patients with AF) and AF− group (27 patients without AF). [Fig. 5](#f0025)(ref-type="fig")A illustrates the distributions of the RRI values at each time point. The RRI of AF+ group was significantly higher than that of AF− group at time points 0.5 s and 1.0 s. Conversely, there was no significant difference in the RRI between the AF+ and AF− groups at time points 2.0–3.5 s. The normalized (by the average RRI values) PSD curves at each time point are shown in [Fig. 5](#f0025)(ref-type="fig")B. The normalized PSD curves at time points 0.5 s and 1.0 s were significantly different between the AF+ and AF− groups. These findings indicate that the enhanced RRI values at time points 0.5–1.0 s and the decreased PSD values at theta frequency bands (0.5–4.0 Hz) are involved in AF pathogenesis.Fig. 5(A) Distributed RRI values of AF+ group and AF− group. AF+ group showed higher RRI values at time points 0.5 s and 1.0 s than AF− group. (B) Normalized PSD curves of AF+ group and AF− group. At time points 0.5 s and 1.0 s, the PSD curves of AF+ group and AF− group were significantly different.Fig. 5 4. Discussion (#s0065) ===== In this study, we developed an AF detection algorithm with high specificity and sensitivity using HRV features such as RRI, PSD and RMSSD. We applied the proposed 2d92ce491b
