I am really happy with articles quality and presentation.. Save to jake gifford dating 23, 2016  
· Download Spl Kill Zone 720p Vs 108044 >>Q: Why are my rows returning null when using not equal to operator in my query? I have the following query which is returning null values for some of the rows even though they have a value of 1. Here is the query  
SELECT activity.id, activity.name, unit.name, (SELECT SUM(unit\_quantity) FROM unit\_activity WHERE unit\_activity.unit\_id = unit.id) AS unit\_quantity FROM unit\_activity WHERE unit\_activity.unit\_id = 5 AND unit\_activity.unit\_activity\_id = activity.id GROUP BY activity.id, activity.name, unit.name ORDER BY unit\_quantity DESC  
Here is the structure of the table: Table structure for unit\_activity  
Here is the structure of the table: Here is the result: A: If your id field is a primary key then this should be doing what you want:  
SELECT activity.id, activity.name, unit.name, SUM(unit\_quantity) AS unit\_quantity FROM unit\_activity JOIN unit ON unit.id = unit\_activity.unit\_id JOIN activity ON unit\_activity.unit\_activity\_id = activity.id WHERE unit\_activity.unit\_id = 5 AND unit\_activity.unit\_activity\_id = activity.id GROUP BY activity.id, activity.name, unit.name ORDER BY unit\_quantity DESC  
You may want to consider creating a new id field in the unit\_activity table that is not a primary key. This would make the join faster and cleaner.  
Steve I believe the consensus is we should develop another market for Peaker capacity. The fundamental problem is that, while we can have the capital required to build a new peaker plant, the market simply does 2d92ce491b
