All of the following can be used to prepare files for the purposes of being retouched: • Photoshop • Camera Raw • Photoshop Elements • Adobe Lightroom • Adobe Bridge Photoshop The latest version of Photoshop CS6 (at the time of writing) is called Photoshop CS6. It can work with the following file formats: • JPEG • PNG • TIFF • GIF • BMP • PSD • DNG (digital negative) Cameras usually create files with the JPEG or TIFF formats. Photoshop supports all the standard file formats of cameras — JPEG, TIFF, GIF, BMP, and PNG. More than 90 percent of the creative professionals out there use Adobe Photoshop. Its popularity is not due only to the fact that this is the world's most popular photo editor — it's also the cost-effective solution. It is highly affordable and fairly easy to learn, and it handles most types of image files and includes an abundance of tools. To make the most of any program, it's very important to know exactly what it does, so check out the next few sections for an overview of Photoshop's tool features. Opening files with Photoshop To open a file in Photoshop, simply double-click the file in the image bin or navigate to the folder and open the file there. Photoshop assumes the file is in a folder and opens it for you. If your file opens automatically, double-check that it opens as the proper file type and name. It may not be named the same as the photo. However, if you choose to open the file, you need to select the type of file it is, as shown in Figure 8-1. The top section is labeled Adjustments, the second section is labeled Layers, and the last section is Adjust Image Size. The first section of the Adjustments dialog is where you define or enter the type of file. **Figure 8-1:** The top area of the Adjustments dialog enables you to select a file type. If your file has no name, type the name in the Name text box. Don't type in the extension name (such as jpg). When you first open a file, the default location is the recent picture section of the Windows Open dialog box. You may have many different files in this area. Choose a different

Features of Photoshop Elements As the name suggests, the home version contains fewer features than the professional edition, but does not limit you in what you can edit. You can create color adjustments, composite images, mask and layer effects, and crop images. Elements comes with a built-in image viewing tool that can open images from both the local storage and from the Internet. It can recognize most of the image formats, including GIF, JPG, PNG, BMP, TIF, PSD, and JPG and PNG files with transparency. You can edit images on a file-by-file basis. It allows users to open images, apply the appropriate adjustments to them, and save them. On Windows, the program can be used to open raster and vector images and edit them in layers. You can also add special effects such as blurs and shadows. You can customize settings for layer masks in a very intuitive manner. Elements supports multi-touch gestures that allow you to magnify images, move a layer between selected layers, or perform other tasks. It also includes a wonderful Filters section that enables the user to change the appearance of any object in the image. Elements is compatible with Google Cloud Prints and can print images. For Android devices, you can create photo books, create slideshows, and import images. You can upload images and videos to Dropbox, Apple's iCloud, and other online storage services. It allows you to share your work by exporting as either a TIFF, JPEG, JPG, or BMP file. Elements makes use of Adobe's Creative Cloud service, which lets you automatically synchronize your work with other software tools in the service and make them accessible from anywhere. Adobe has a rich library of creative tools including InDesign, Illustrator, Photoshop, and Lightroom. Photoshop Elements lets you open images in full resolution or reduce the image resolution. You can also view them in the preview pane. Elements can edit raw and partially compressed images and supports all the color channels and 16-bit options. Selective and non-selective ICC profiles are also supported. You can save images in a wide range of formats like JPG, JPEG, PNG, GIF, TIFF, BMP, PCX, DNG, PSD, and DIB. It can import and export Photoshop files a681f4349e

Q: R package design: How to elegantly restore registered names Assuming the following dependency specification of the R package xx: `devtools::register("xx", version = "0.1.1", author = "x", license = "", dependencies = c("pracma", "testthat"), CRAN = "")` the R package xx is automatically built, versioned, and distributed via CRAN. Now I want to restore the registered package name from a different package name: `R> require(xx) R> spp::ppp()` (note: spp is the package name, which I want to overwrite). Is it possible to simply get the registered name from the package I just loaded (xx) via: `R> getwd() R> grep("^\\?xx", getNamespace("xx")) R> sapply(getNamespace("xx"), function(x) { grep("^\\?xx", x) })` and then overwrite the required package name? Such a mechanism would be handy to avoid manual changes in multiple locations. A: The solution is to use the file-system package for such cases. Require the package 'fs' as usual: `R> require(fs)` Define the namespace where the required package is saved: `R> fs.ns fs.path("~/Projekte/R/xx/test") [1] "/"`

their data to the courts. Abuse of a cop by a stalker is a serious crime deserving of the maximum penalty, but in this case, Anae was found not guilty of stalking the cop and of possessing a cellphone when arrested. So while the cop might not like that a citizen of the country is having a picnic in their front yard, it certainly wasn't deserving of stalking charges. Not to mention the cop charged him with resisting arrest and child endangerment. Someone who gets off his ass and is actually taking action against a problem in society will fare much better than someone who is also taking action against problems in society, but isn't doing enough to enact lasting change. So while the cop might not like that a citizen of the country is having a picnic in their front yard, it certainly wasn't deserving of stalking charges. Because people say things like that, I feel compelled to point out that "taking action against a problem in society" is not a value judgement. I'm fully in favour of taking action against a problem in society, and I'm only saying that because he took action against a problem in society, that doesn't give him the right to claim that he was not discriminated against. You're telling me that it's all right to criticize those who take action, but not to criticize the people taking action who are discriminated against? Pretending like the law doesn't apply to you is not exactly the same thing as consenting to the law's application to you, especially when you're not 100% of the way there yet. I can say "I think you're a stupid person" with a smile on my face or I can point it out in an unlaugable manner. I don't think I'm evil just because I do the latter, just because I criticize it. In any case, I can't see the relevance, since the cop was not condemning him for being gay, just saying that people who are trespassing in your yard are there to harass you, but the law is indifferent to who is doing what to whom. So while the cop might not like that a citizen of the country is having a picnic in their front yard, it certainly wasn't deserving of stalking charges. Because people say things like that, I feel compelled to point out that "taking action against a problem in society" is not a value judgement.
