# Visual Irc For Windows [Latest-2022]

## Visual Irc Full Product Key Free PC/Windows (2022)

Visual Irc Free Download is a personal IRC client. With ViRC, you can - chat on multiple servers in one window - save your settings for each server in the registry - minimize to the tray while leaving your window running (opposites of ViRC 3.3 and ViRC 3.4) - automatically switch windows to the server of interest while keeping the rest running - view and edit a server's settings from the registry - run ViRC in full screen mode - set your status for individual servers - join a server using its name or IP address - DCC talk and DCC file transfer - use IRC, MSN, IM, ICQ, AIM, Yahoo and MySpace chat rooms - handle multiple IRC networks (e.g. IRCAIM, IRCgaim, IRCMySpace, IRCYahoo) - tabbed window layout - fully customizable toolbars, text, and menus - user and server profiles - snapshot of IRC window contents as image - many more features - server list and user list can be merged into one window (ViRC 3.5) - auto and manual spell checking (ViRC 3.5) - auto copy/pasting of nicknames - uses images for user list (left margin) and nick icons - uses icons for chat windows (center) and rooms (right) - color schemes - background sounds - Minimize to tray, and use ViRC as a windows manager - Full multi-monitor support Installed, opened and tested. Works very nice. What doesn't work: \* The auto-reconnect after disconnection. When I open another client, ViRC disconnects from #comp.freenode.net, joins #comp.freenode.net and tries to reconnect to #comp.freenode.net, which is already connected to a different network, and therefore the connection doesn't work. \* The fully customizable toolbars are VERY small on a 1280x1024 screen. I can barely see them! \* The user and server lists are very small. I'm afraid some misspelled nick names might be lost. What needs improvement: \* The user and server lists could be moved to the upper left corner. There is plenty of room there. \* If you click on an image link, ViRC opens another window containing the

## What's New in the Visual Irc?

The most versatile irc client on the planet. What is "ViRaC"? ViRaC (Visual IRC Client) is a revolutionary irc client that makes use of the GUI's power to make an IRC client similar to a Windows application. Compared to the standard text clients there is almost no need to use the keyboard. Visual Irc has everything you need on your screen, and all you need to use are your mouse and the mouse's "point and click". What makes ViRaC different? ViRaC can run under Windows 95/98/ME/NT4/2000/XP/2003 with or without MS.Net Framework. It can be used in both client/server setup. It can also be used to make a program that behaves exactly like another one. It can act as a channel bot when pre-registered. It can serve as a server on any network protocol that supports SMTP. ViRaC comes with many features including Create New User Profiles, Design your own Window Menus & Toolbars, and Record your own Whiteboard Event Sounds for better privacy. ViRaC by no means replaces ViC Pro - ViRaC is a irc client that offers more than ViC Pro and is much more powerful. ViRaC gives you the power to take over your computer and use it as a software application. Imagine having all the main features of the standard text clients on your computer. Try it and see - you'll be surprised at how much time ViRaC saves you. Why can ViRaC take over your computer, and not other clients? ViRaC makes use of an interesting design that allows users to make "Server Profiles" that would look exactly like the respective applications or servers. It is possible to create a Server Profile that would look like the standard text clients - or even another application. It also allows for the creation of custom User Profiles. Once you create a new user profile, you can customize it to your heart's content, and transfer those settings to the standard text clients - and vice versa. ViRaC provides all the normal irc client features such as Nick List, Channels, Message History, etc... Also ViRaC provides a dcc version - that can be used to transfer files as well as resume a broken transfer. What are the various applications of ViRaC? ViRaC can be used as a turnkey application (with support for .Net Framework 3.5) or as a stand

---

## System Requirements For Visual Irc:

Operating System: 64-bit Windows 7 or later. 64-bit Windows 10. 64-bit Windows 8 or later. 64-bit Windows Server 2012, Windows Server 2012 R2, Windows Server 2016, or Windows Server 2019. Note: If you want to use MOBAs (Multiplayer Online Battle Arena) or RPG's (Role Playing Games), you may have to use a 64-bit version of the operating system. Processor: 1.8 GHz Intel Core i5-750
