Here are some basic steps for using these tools. Step 1 Open an image in Photoshop. It is often best to start from an open file so that you can see the entire picture. However, if you want to work on a specific area of the image, you can first turn on the area you want to work on. Step 2 Load the Brush tool. In the menu bar, choose "Brush Tool" and then "Brush Options", as shown in Figure 4.1. Here, "S" indicates a soft brush. Figure 4.1 Open the Brush menu. Step 3 For the brush size, the "Spacing" depends on the size of the image and the desired effect. A small brush may be used to create fine details in an image. A large brush is better for generalization and may be used in areas that do not have fine details. In Figure 4.2, the brush has been set to a size of 30 pixels. Figure 4.2 Set the brush size. Step 4 To show the Brush Tip Preview, choose the "Opacity" button (it is labeled "T") to the left of the Brush Size button (Figure 4.3). Then move the brush over the area where you want the details and paint. Figure 4.3 Open the opacity button and move the brush. Step 5 When you have finished painting, the Brush Tip Preview will disappear, and the Brush tool will move on to the next area. To paint more, hold down the Shift key and move the brush to the next area. Step 6 To duplicate the brush, choose "Duplicate Brush". This will make another brush of the same size. To add to the existing brush, choose "Add to Brush". Step 7 To change the size of the brush, choose one of the presets on the Brush Size menu, or type the number of pixels into the box. The remaining brush sizes are shown in Figure 4.4. Figure 4.4 Select a brush size. Step 8 After you have a brush the way you want it, you can use it to paint another area of the image. Try painting in the last example (Figure 4.2) to see the difference that the brush tip makes. Step 9 You can now use the brush to repaint the details. To change
