FAQ

What Is DeadLock? DeadLock is an online and easy-to-use utility that allows you to unlock files that are not allowed to be modified or removed by the corresponding processes. This software can

---

be safely used on any Windows computer. When You Need To Unlock A File? There are several occasions in which you may need to unlock a certain file. For example, if you are not authorized to access the corresponding folder, you may find yourself in a situation in which you

---

cannot remove, replace or modify the file. Another situation in which DeadLock can come in handy is when the owner of the document wishes to access the corresponding file. The user might be temporarily disabled, or his/her account might be disabled. In both of the

---

aforementioned scenarios, the user might be unable to remove the document and thus he/she might need your help in resolving the problem. How DeadLock Works? DeadLock works by automatically detecting the currently locked file on your system. It automatically checks for

---

related processes on your system, among them, the Explorer. The application then downloads all the information related to the file, including its original location and the permissions of the item. If the file is locked by some process, DeadLock will check the process for its current state. If

---

the process is on, you will be prompted to unlock the file. If the process is off, the application will try to unlock the document by connecting to VirusTotal and performing a scan. DeadLock Features: 1) Create My Own Scanner: DeadLock scans your computer for a specific file.

---

You may choose to import multiple files at once. 2) Scan Online VirusTotal: Through this feature, DeadLock scans your file on VirusTotal's service. You may define the amount of scanned files to analyze and perform a scan for each file. 3) Lock & Unlock Document: Allows you to lock

---

or unlock any document on your computer. You may also define the protection level for the file. 4) Backup And Restore: Allows you to create, modify or copy documents on your computer. You can also manage the document backup and restore. 5) You can change the color and the font of the

---

document. 6) You can convert the document to an image. 7) Support: DeadLock can be used on any Windows computer. Any questions or feedback are welcome. Abdulrahman Al-Jasimi Abdulrahman Al-Jasimi () (born 26 June
