The jpConnect project was co-founded by Ryan McKay and Ben\_Wilson at the University of Manchester and University of Sussex, under the auspices of the Union for European Ph. D Students (UPRESEM). The joint goal of the project was the creation of an Internet-accessible repository and client software for the Schoology Learning Platform. The project was designed to both increase the accessibility of a collaborative online learning platform to students, especially the visually impaired, and to reduce the cost of supporting a website that demanded a significant amount of labour and resources to maintain. At the University of Manchester, the project focused on the development of the repository. At the University of Sussex, the focus of the project was the development of a client application. GeometryGuru Description: GeometryGuru is a multimedia software program with a graphical interface that is designed to teach students about the basic concepts of geometry and coordinate geometry, including plane geometry, conic sections, circles, theorems, and proofs. GeometryGuru Features: - Audio/Video-based teaching of geometry - any chapter can be viewed in full "on-screen" or in a small, self-contained window. Essential theorems on a single slide - each theorem is stored as its own slide that can be easily viewed by the teacher or student at any time. Various types of strain gage transducers have been used for position detection or measurement of a bending stress. One type of strain gage transducer is the parallel plate capacitive strain gage transducer. An example of the parallel plate capacitive strain gage transducer is disclosed in the U.S. Pat. Thus, serotonin might also be involved in the synaptic and behaviour changes in rats exposed to maternal separation. However, apart from the changes in 5-HT and 5-HIAA levels, the observed maternal separation effects in our study are in line with the recent demonstration of activation of the serotonergic system in human adolescents in vivo [25](#bph14168-bib-0025){ref-type="ref"}. In the study by Feierabend and colleagues, adolescents were investigated with a PET ligand to label 5-HTT and found an increase in 5-HTT density throughout the brain, especially in the prefrontal and medial temporal cortices. Although our findings are in line with previous rodent research, we did not observe a direct effect of maternal separation on 5-HT transmission and effects in the brain. However, we detected marked alterations in serotonergic signalling. A direct alteration of serotonergic transmission would manifest as a different modulation of the serotonergic system under different conditions and, thus, a change in 5-HT and its metabolite 5-HIAA levels in the absence of direct effects on 5-HTT binding. Puberty and stressful circumstances, such as when a mother behaves in a
