### What's New In Internet Traffic Garbler?

An Information Security Utensil to prevent information leakage to a hacker on the web while avoiding 'session hijacking' during a hacker attack. One can remain anonymous on the Internet as it garbles outgoing and incoming Internet traffic. It also hides one's IP address, thus can be used to surf the internet anonymously. Key Features: [The program works on Windows 2000/XP/Vista/Windows 7/8](#) [It encrypts outgoing and incoming internet traffic.](#) [This must be done through Internet Proxy.](#) [It hides the IP address which is crucial for all internet surfers.](#) [It hides your presence on the web completely as there is no indicator of being logged-in while you are surfing the web anonymously.](#) [It also deletes all traces of your information, your IP address, domain name and other useful details from the computer.](#) [It hides the fact that the windows operating system is being used as a tool for online surfing.](#) [It creates a fake IP address and some other windows OS information.](#) [It deletes the cookies, java applets and activex module that make your page experience more secure.](#) [It also blocks the advertisements and banners on different pages to ensure that visitors get only the type of content that they want to see.](#) [It also blocks the counter on a page to avoid the visitors from knowing the exact number of visitors and to avoid spam comments.](#) [It blocks the Java applets so that a hacker can't access your stuff.](#) [It also blocks the Flash ads which may keep a user from being impressed.](#) [Lastly it can hook an IP address to a different online address.](#) Finally, there is no record of what you have done at all. No one can access the logs and all traces of your activities on the Internet are deleted. Also, it can remain undetectable since it can easily pass through a firewall and can infiltrate the most resistant firewall. Internet Traffic Garbler Features: This is the most useful software as it makes surfing the net anonymously easier, the firewall protected on your system and deleting all data on the web including a file that a hacker can read. It also protects your privacy as it lets you surf the net anonymously while preventing IP address leaks and making your domain name and IP hidden. It also masks your domain names through a fake IP address and prevents your ISP and
