dangerously low. Description: Add a “reset” to your webcam’s default setup screen, to ensure that there are no leftover artifacts or flickering. Very useful for webcam owners who have been using the camera for a long time, or when they need to update their browser’s default setup screen. Very simply, this application will replace the webcam’s “reset” default setup screen with one of its own. Usage example: XInput auto-reset is a small application designed to help webcams and

other input devices that use the XInput API. When an application reads or writes to the webcam's control registers, the webcam will be reset by a combination of a hardware reset and a software reset. Although this is a very small application, it can provide some benefits to webcam

users who are looking for a quicker way to reset their webcam, and does not require the use of a scripting or other software language. Introduction
