in March 2011, Autodesk announced a brand new API called "Autodesk Forge," which allows developers to create their own extensions for AutoCAD and compete with the existing AutoCAD Add-on vendors. As of January 2016, the new API and Autodesk Forge tool set is available to license at a charge. Forge was designed to allow AutoCAD users to create their own custom extensions and extend the functionality of AutoCAD. Forge enables Autodesk customers to create their own applications in addition to building extensions for AutoCAD. Adobe Illustrator Adobe Illustrator supports a series of APIs to customize or automate the application. Most of these functions can be controlled by scripting. Image processing AutoCAD includes numerous functions for image processing. The functions include the ability to read a large number of images into the drawing, such as medical images, satellite images, or other file types. The functions include the ability to export and import images from other programs such as Photoshop or other image editors. Imaging modules The Imaging Modules extension allows users to insert panoramas or stereographs into a drawing, while the Extension Manager extension allows users to insert numerous image tools, such as zooming and rotating functions. A: I know $\lim_{\epsilon \rightarrow 0} \frac{\sqrt{(\epsilon^3 + 1)^6}}{\sqrt{(\epsilon^3 + 1)^2}} = \frac{1}{\sqrt{2}}$ but I don't know how to use this to solve this problem. A: I just noticed that you have the wrong variable. Note that $\sqrt{\epsilon^6 + 1} = (\epsilon^3 + 1)^3$. So, $\lim_{\epsilon \rightarrow 0} \frac{\sqrt{(\epsilon^3 + 1)^6}}{\sqrt{(\epsilon^3 + 1)^2}} = \frac{1}{\sqrt{2}}$.
