PDF.Silatitimide, isolated from an endophytic fungus Aspergillus silatii, induces apoptosis in cancer cells. The discovery of small-molecule anticancer drugs is a challenging but necessary task in the field of cancer drug development. In this work, silatitimide (1), a new bis(thio)indole alkaloid, was obtained from the endophytic fungus Aspergillus silatii. The structure of 1 was established on the basis of extensive spectroscopic analysis. Compound 1 exhibited significant cytotoxic activity against human cervical cancer cells (HeLa), human hepatoma cells (SMMC-7721), and human lung carcinoma cells (A549) with IC50 values of 10.28 ± 0.56, 11.10 ± 0.40, and 11.42 ± 0.45 μM, respectively. Further investigation indicated that 1 induced apoptosis and reduced mitochondrial membrane potential in HeLa cells. Kinome-wide phosphoproteomic analysis indicated that 1 treatment resulted in strong activation of the proteins involved in the apoptotic pathway. These results suggest that 1 may serve as a lead compound for developing novel anti-cancer drugs.Early American Hall (Antiquarian Hotel) The Early American Hall is a historic hotel building at the corner of Sixth and Main Streets in Chestertown, Maryland. It was built about 18
