If you are searching for a fast and lightweight editor, we suggest you try the trial version. Why you want it:

Portable PlainEdit.NET has no installation, so you can extract the program files to a custom directory on the disk and instantly launch the executable. Portable PlainEdit.NET is also available for Windows 98/ME/NT/2000/XP. What's New in Version 5.0.2.3371: Added support for short lines in line number dialog. Added new feature for labels in a table. Correctly formats new line after a new line, so you can double-click on a label to insert the next line from a text file. View options for the editing pane and the large view field are now customizable. Some minor improvements to the encoding dialog. Added a separator line option in the Unicode font dialog. Added a special character map in the text panel when a Unicode font is selected. The default font dialog is now resizable when selected. The New Line dialog is now resizable when selected. Fixed some minor memory leaks. Fixed a bug when the application failed to open a file if there were no Unicode fonts available. Just excellent! First, a quick note to all of the people that posted negative comments about the need for an uninstaller: it's not perfect, but it's significantly better than it used to be, and there's nothing wrong with that. Also, if you think that people downloading an application only for the sole purpose of removing it in the future is a problem, I suggest that you spend a day downloading the average software package, and taking the time to read the license agreement. I have worked with these types of applications, and I find them perfectly acceptable. I was pleasantly surprised by the editor and it's simple and intuitive interface. It didn't offer much beyond that, but the intuitive options to customize the font, the various color schemes, the ability to quickly insert a short line, the copy and paste text, and the ability to easily and quickly undo commands makes it an intuitive tool for sure. I found it to be rather fast 09e8f5149f

What's New In PlainEdit.NET?

If you have an.msi installer, then your uninstaller will generally run with Administrative rights. That means you need to run it for your user account and not for the 'administrator' account you have on your PC. If you run it for your user account, then when Windows asks you to confirm the uninstall, you usually see a prompt for your administrator login, where you then need to enter your administrator login and password to uninstall the program. You can test if your uninstaller runs as administrator by right-clicking the msi file and selecting "Properties" and then checking the "Uninstall" tab. You should see the option "Run the Uninstaller with administrative privileges". If that's not the case, then you need to contact the people who created the installer and ask them for the proper instructions for uninstalling the program. If you want to do the uninstall from your user account, then you need to create a local shortcut to the msi file. Right-click on the folder that the.msi is in and select "New" and then "Shortcut". A new shortcut will be created. Right click on the shortcut and select properties, and the "Shortcut tab" will be displayed. Change the settings as required. "Target:"= C:\Program Files\JetBrains\YourApp\YourApp.msi. Click OK when done. This new shortcut will be created with the "Run as administrator" option checked. So, when you run

the shortcut to uninstall the program, you will have admin-like access to the msi file. The program files install location may be different if you have a paid version of the program. But for most users, it will likely be in C:\Program Files\JetBrains\TheApp\Portable PlainEdit.NET. I installed a new version of the program with the "update" option. But when I tried to uninstall, I got an error saying that the uninstaller was not found. It actually shows the installer as a program with no install. That was weird, but I did some googling and found that this is probably because the uninstaller is not marked for uninstall. So, I ran the uninstaller as admin, and got the normal prompt where you have to enter your administrator password. Then it uninstalled the program. Wow, thanks for this excellent answer. I was new to MS WiX and installers,
