Sixaxis Controller Android App Screenshots: Instructions To Pair Bluetooth Controller with Android Device The Sixaxis Controller Android app was designed to allow Sony Sixaxis, Navigation, DualShock 3 and DualShock 4 controllers to be paired with a mobile device and used for gaming. For the controller to be used on a mobile device, however, you need to use the Sixaxis Pair Tool to establish a connection between them. Both this program and the mobile app need to be installed beforehand. First of all, you should connect the controller to your PC via USB. Then, launch the desktop application and check if a Bluetooth address is displayed at the top; this is the device that the gamepad is currently paired with, and it needs to be swapped with your mobile device. After installing the Sixaxis Controller Android app, the Bluetooth address of the mobile device should be displayed, and you need to type this value into the empty field in the desktop application window. Finally, click Update to pair the controller with your mobile device. It is important to note that your Android phone or tablet needs to be rooted for this pairing to be performed. Also, some devices are not supported as they lack the required Bluetooth protocol. To make sure your device is supported, you can install the Sixaxis Compatibility Checker Android app. Sixaxis Controller Android app Description: The Sixaxis Controller Android app is designed to be used with most Android phones, tablets, and some Samsung models.
