Applications which allow users to extend AutoCAD's functionality by customizing features, such as ThumbsUp, Clarity, AutoCADwall or that allow them to produce specific features such as AutoCADGeom, are called Autocad add-ons. related products. Interchange files are used to store data objects in the drawing, not to store the drawing itself. The.cad format is a proprietary, undocumented file format for storing drawing data in the drawing. The.dwg file format is the native file format of AutoCAD's drawing application. DWG files are used to store drawing information. AutoCAD 2010 stores the DWG and.dwg files in a container file type, the DGN file, which can also be imported as an.i file or exported as.dwg files. AutoCAD 2011, AutoCAD LT and AutoCAD Web 2013 can export as.dwg, AutoCAD Draw, a proprietary binary file format, which stores all drawing data as separate binary elements, which have to be subsequently concatenated by the user; or as.dwg files..DGN files have been created in AutoCAD from drawings saved as either.dwg or.dxf. The.if and.itx file formats are used to store style and template information for AutoCAD. The.if files contain a template data structure which describes the drawing, its background, grids, styles, and toolbars. Styles are then applied to objects, including text style parameters such as font, color, font size, point size, and weight..itx files contain a description of the selected template, and the user chooses from the options contained in the.itx file to create a drawing. The.edm file format is an extension for the Edit Data Manager (EDM), the system used to save model data for editing in other applications. The.edm file format is a proprietary, undocumented file format for storing model data in the drawing. Many Autodesk products, including AutoCAD, use the Extensible Document Format (EDF) to represent geometry. The EDF file format is described in.EDF 1.0 and 2.0. Its format is a subset of the well-known ASCII file format. 5b5f913d15
