===== Mielophone Description ----- Mielophone is a minimalistic application built for searching, listening, and downloading new music. It uses a mix of different online databases to provide info about artists, albums, and songs. Colorful interface Similar to Microsoft Metro design, the app's layout is simple enough to find music online whether you decide to search for it by certain songs, albums, or videos. The program also offers means to find and gain access to various online radios, and connect to multiple social media websites. Simple but dynamic features The easiest way to find streamable music is to click on the artist, album, or song icons, and immediately a whole list of data is made available, out of which the user can pick his favorite song to listen to. After an audio file has been found and streaming begins, users can add them to their playlist or find its afferent video from many online sources. For music database, Mielophone uses MusicBrainz, Last.fm, and BBC Radio. Although not a great tool for some, the combined music discography it offers is enough for any casual user. You can also listen to radios just like you would with music: the software application connects to an online source and the streaming process starts. Mielophone also comes with a bunch of default popular radio stations and can even offer some suggestion-based categories. If none of those hints fit you, a URL bar allows you to input and play your favorite radio's link manually. Additionally, playlists can be imported or saved in/to MPL files. These carry data and URLs required by the application to stream your favorite songs. However, many other options have problems. Useless features like 'Tags,' 'Moods,' and 'Videos' can make this media streaming app feel a bit underdeveloped. Conclusion Mielophone is an interesting application developed to mimic the typical Microsoft Metro control interface. It offers streaming support for many online music websites and can remotely play your favorite radio stations from within the program's main window. However, dysfunctional features can hinder users that expect basic options, like interface customization and online video rendering, to work smoothly and without issues. KEYMACRO provides users a Mac-specific voice activation tool. The software works as a voice-recognition system which allows the user to turn the computer on or off, open the Finder, etc. with just a voice command. Multilingual Besides English, the app supports German, French, Spanish, Portuguese, Italian, Dutch, Swedish, Danish, and Norwegian. With this tool, it's possible to run any program or even script you like using voice commands. It's possible to have your computer run any other app with the help of voice recognition. All you have to do is download this app, then add the desired vocabulary and commands to the Mac. By adding a voice command, it becomes possible to operate all program features via voice. You can now interact with Mac via voice commands, with just the press of a button. KEYMACRO works as a universal tool for any Apple Mac user, and will become a key feature in your Mac use, by offering a useful feature to the users. Price: Free PCL-Mac App Store Reviews: "...a useful tool that helps make the Mac even more accessible" "...keymacro is one of those programs that makes you consider a completely different way of working" "...reminds me of how I used to use my Mac... but never again. I may need to... Keymacro is one of those programs that makes you consider a completely different way of working. It gives you the opportunity to use your Mac's native voice activation commands, which have until now been restricted to the iPhone or iPod touch. keymacro is one of those programs that makes you consider a completely different way of working. It gives you the opportunity to use your Mac's native voice activation commands, which have until now been restricted to the iPhone or iPod touch. What is the app called? Mielophone Crack is an application that helps you find, listen to, and download music. What does it do? Mielophone is an online music application that helps you find, listen to, and download music.
