Add a Macro to Import a Template from a Template Library or FTP Server Keymacro Description: macro/keymap Macros were previously referred to as Keystrokes. Macros are any program that will take input from a text source and produce a final output based on the input. The original idea of macros was to provide a way to use common strings and commands in a quick and easy manner. The real power of macros came into play with the introduction of the wild card or argument character. Instead of using the +, *, and ? which have been used for many years, the wildcard character is used. Macros can be used to automate tasks, such as importing PDF templates, opening document templates, and opening multimedia documents. Macros allow for text, document and multimedia content, along with the output format to be specified on a template and applied to new documents as the documents are created. The Macro Builder is a powerful, yet easy to use tool that allows you to define a macro for any InDesign document. The Macro Builder is accessible from the Macros menu on the Macros tab, and from the Macros popup window. Macros have the following capabilities: Macro Source: Allows you to select any component of the document that you want to be used as the source of the input in the macro. The macro can be constructed by typing text into the Macro Name edit box, or by selecting text from the document and pasting it into the Macro Name edit box. Macro Purpose: Defines the output that is to be produced as the result of the execution of the macro. Parameters: Allows you to specify any of the parameters required by the macro as being required by the macro. The order of the parameters in the Parameters edit box is the order that they are used by the macro. Defines the output format to be produced as the result of the execution of the macro. macro/parameter macro/samplenmacro.**Using Macros** macro/parameter Uses the input from the Content text box as the parameter value. Useful parameters include: InputParameter.Text content InputParameter.Value Note that the value of the InputParameter parameter is a string, and not the text source in the parameter. The source of the text is defined on the Macro Source tab. InputParameter.Numeric Uses the input from the Content text box as the parameter value. Useful 1d6a3396d6
