The first Autodesk product was 2D graphics software called "AutoCAD", designed as a low cost CAD tool for the personal computer market. It was launched in 1980 with a first version released for the Apple II and the TRS-80 personal computer, marketed as a "Drawing" program. As its name suggests, AutoCAD is for drawing 2D drawings. The first version of AutoCAD for the IBM PC was released in 1985. By the year 2000, Autodesk had a market share of over \$2 billion in the United States with revenues of \$1 billion. AutoCAD is widely used as the primary CAD program for design and engineering in a variety of industries, including architecture, manufacturing, engineering, and construction. Because of this versatility, Autodesk makes its software available in many different versions for the use of customers with differing needs and usage patterns. The most recent version of AutoCAD, AutoCAD LT, was released in 2002. It is the successor to the earlier, discontinued AutoCAD 2000. Compatibility AutoCAD is available in multiple languages including English, German, Italian, Japanese, Polish, Portuguese, and Spanish. The program can be used on many platforms including DOS, Windows, Macintosh, UNIX, and Linux. There are also a wide variety of third-party products available for AutoCAD. The most popular of these, and the main one for AutoCAD users, is the DriverTuner program. Also of note are the ReviewCube product line, which is focused on rapid 3D drafting, and the PowerDistiller products, which are aimed at business users. AutoCAD is also available as a mobile app for Android, iPad, and Windows Phone. Use by architects Although AutoCAD is not typically used as a structural engineering application, the program is widely used by architects. Architectural drafting is more expensive than engineering and design, and therefore has the highest market share of CAD software among the three types of CAD applications. Typical tasks performed in AutoCAD by architects include: Create architectural blueprints Provide basic structural analysis Establish BIM environment Collect data for content management A typical architectural workflow begins with a 2D project and may include tasks such as measuring, drafting, creating scales, and viewing a 3D model. Architectural blueprints may be created in 2D or 3D. The CAD

The use of a programming language, such as Visual LISP (VLS), Autocad API for ObjectARX, AutoLISP, or others, is referred to as AUTOCAD/LISP. AUTOCAD/LISP is implemented in LISP, a programming language which was invented at MIT in the late 1950s by a team led by John McCarthy. With the release of AutoCAD X2, the language became available on Windows, Linux, and Mac, and can be used in combination with any other programming language, such as C, C++, or Delphi. AutoCAD Modeling Language (AML) is a high-level modeling language for the AutoCAD and MicroStation modeling programs. It is a proprietary tool created by Autodesk in 1986 and first released in 1987. Support for AutoCAD as a scripting language is provided through the use of one of the many third-party development tools. As of Release 15, AutoCAD can generate and use XML code. The interface is driven by XML and was introduced in Release 16. Data and data sources When opening a drawing from a file in AutoCAD, that file can be stored in a variety of formats. File formats include: DXF (RADAR and earlier). As of Release 2007, AutoCAD supports the Exchangeable File Format (XREF) since version 2006, which is a standard in the definition of 3D and 2D drawings. DWF (RADAR). In AutoCAD 2007, the DWG format supports full XREF functionality, which means that DWG files can be opened and saved without any changes. Since AutoCAD R14, DWG supports XREF. DWF (RADAR and earlier). In AutoCAD 2007, the DWG format supports full XREF functionality, which means that DWG files can be opened and saved without any changes. Penguins' 3-5-2 formation is not a perfect marriage The Pittsburgh Penguins and the Florida Panthers were dressed in a simple 3-5-2 formation during the first half of Sunday's game at Consol Energy Center. The Penguins were at a bit of a disadvantage and the Panthers had the advantage on the scoreboard at the half, but this isn't a perfect marriage of a new formation for the Penguins. Instead, it's more of a stylistic change that has only been in the Penguins' system for a year. It's a system that has the Penguins at their best. At the half, the Penguins trailed the Panthers, 2-1, on two goals by Brad Boyes and one goal by Derek MacKenzie. They had a perfect scoring chance by Sidney Crosby to break the tie, but he couldn't find the back of the net. He may or may not find the back of the net early in the second half. Sidney Crosby had an assist on Patric Hornqvist's goal at 12:37 of the second period. That was the only other goal allowed by the Penguins in the first half, when they allowed five goals. They allowed four goals in the first period. Three of the four goals came in the first period. There was more of a line-matching issue in the second half. Both Derick Brassard and James Neal were healthy scratches. Brassard, who has five goals, was a healthy scratch for the first time this season. Neal, who has seven goals, was healthy scratched for the first time. Neal has been an offensive catalyst since returning to the lineup at 5 on Dec. 9. He was a minus-4 in the first eight games of the season and has been a plus-10 in the last 10 games. Brassard has been very good with the puck. He has two goals and one assist in the last 10 games. Brassard, however, has a minus-4 rating in the last 10 games. He has a plus-2 rating overall and a plus-3 rating in the last 10 games. Neal had an assist on Brassard's goal, Hornqvist's goal and Crosby's goal
