Clouds Of Venus 1.1 Clouds of Venus brings the look of a planetarium simulation to your desktop. Hundreds of stars, clouds of various shapes and sizes, twinkling light and rainbows: all of this in space! It's all light simulation, no need for a real star field. The sky is either dark or light depending on the atmospheric conditions of the simulated planet. Clouds of Venus is made up of a few different 3D objects: Star, Firestorm, Raindrop and Cloud. Each object is simulated in three colors: Day, Night and Cloud. DownloadCloudsOfVenus. Clouds Of Venus 2.0 Clouds of Venus 2.0 is a minor update to Clouds of Venus 1.5. The most noteworthy improvement is the reworked star field, which looks much more realistic, thanks to using better filter textures. Clouds of Venus 2.0 also adds some improvements to the raindrops, but it is mostly the final release version, which will be upgraded soon. DownloadCloudsOfVenus2.0. What's New In?

MoireScreenSaver is a scrolling wallpaper. A: I would give a try to BlinkingCursorScreenSaver instead of MoireScreenSaver. 1. Technical Field This invention relates generally to flag and emblem holders, and more particularly to a flag holder for releasably fastening a flag or emblem to a watercraft. 2. Related Art A wide variety of apparatus is known for mounting and displaying flags and other similar symbols on watercrafts and like support structures. A common problem with such apparatus is the insecure mounting of the flag or other symbol on the support structure. For example, the flag or emblem is often easily removed from its mount due to wind or other movements of the support structure or watercraft. In these and other respects, the flag holder described herein substantially departs from the conventional concepts and designs of the prior art, and in so doing provides an apparatus primarily developed for the purpose of securely mounting a flag or emblem on a watercraft.Q: "Skinny" vector field in S^3 Let $f: S^3 \rightarrow \mathbb{R}^3$ be a smooth, non-vanishing vector field. Let's suppose that f has the following property: For any smooth map $g: S^1 \rightarrow S^3$ of degree one such that $f(g(\theta)) = \nabla_{g(\theta)} g$ where ∇ is the Levi-Civita connection on S^3 we have $f \cdot g = 0$. That is, for any smooth map $g: S^1 \rightarrow S^3$ such that $f(g(\theta)) = \nabla_{g(\theta)} g$ we have $f \cdot g = 0$. Question: Does this property, combined with other natural conditions on f , imply that $f = 0$? In other words, is there any smooth function $f: S^3 \rightarrow \mathbb{R}^3$ such that $f \cdot g = 0$ for all smooth map $g: S^1 \rightarrow S^3$? If so, what is the smallest possible $\|f\|$? A: Consider $f = \frac{1}{\sqrt{2}}(x^2 + y^2)$.
