Steps for Starting Photo Editing Editing an image in Photoshop involves making adjustments to pixels, such as cropping an image, adding text, adding color and blending layers, and adjusting images. Start by choosing the type of image you want to edit. If you have multiple image formats or different types of images, the first step is to select the format of the file you want to edit. Depending on the file format you're using, you may need to apply different filters or adjust colors. To open an image, select the file type of the image file. You can use a variety of filters or artistic tools to manipulate and enhance an image. Once you've selected the image, click the File menu and choose Open. Go to the type of file you want to save and choose a format such as JPEG, TIFF or PSD. Choose a file location such as Desktop, My Computer, or a folder in either the My Library or Documents folder. If you have many editing tools in your toolbox or want to add new ones to your collection, you can download plugins. Some of these add functional tools for quick and easy use such as a color correction tool, select and mask tool, smart objects, and even advanced filters. Plugins are available for users of Photoshop, Illustrator, Lightroom, and other software or tools. Make sure you have a plan for when you want to make your edits or the details you want to include. When you work on a single image, you can work quickly and save time for the next job. But, if you are creating a series of images that you want to finish before starting a new project, it's helpful to save them out to a folder instead of deleting them once you're done. Tools for Editing Images Some of the tools in Photoshop are the regular Photoshop tools but with more time-saving features. Paint Bucket Fill Select and fill an area of the image with a color, adjusting the highlights and shadows as needed. Gradient Matching Select the colors you want to use and brush them onto your image. Object Selection Use the brush with settings that match the colors in your image to select an object or area. Select All Select all of the elements on the image using the selection tools. Zoom In Zoom in on a small portion of the image to see it in more detail.

A cytochrome c-dependent oxidative burst in diatom *Thalassiosira pseudonana*. A new method for the detection of oxygen dependent respiration in the marine diatom *Thalassiosira pseudonana* was developed. The method is based on the use of neutral red dye as the respiratory electron acceptor. Neutral red uptake, which is proportional to the number of cells respiring, was measured in a defined culture system. Respiration-dependent reduction of neutral red is a sensitive tool for the monitoring of oxidative stress and signaling in *T. pseudonana*. The respiratory burst, which is dependent on extracellular addition of cytochrome c, was found in different diatom cell types, i.e. cell walls of *T. pseudonana*, *Volvocales*, all diatom strains screened and high density cultures of *T. pseudonana*. In high density cultures *T. pseudonana* lags behind the other diatoms in cytochrome c binding. Furthermore the cells show different responses to cytochrome c addition. For some strains the cytochrome c-dependent oxidative burst declines by 50% with further exposure to cytochrome c. This probably indicates a secondary starvation response. This behavior was not found in other diatom strains.

What's New In?

A new poll shows Andrew Wiggins rising as a potential star in the NBA draft. He's already probably the best prospect for the 10th pick in the 2014 draft. (USA Today) Apparently no one told Wizards GM Ernie Grunfeld about a 16-year-old phenom from Kansas City. It's a good job he doesn't have Twitter, because that's the only way he'd find out about a 17-year-old kid whose stock is rising so quickly his name is mentioned in the same breath as LeBron James, Carmelo Anthony and Chris Paul. The only problem is no one told Grunfeld about Rui Hachimura, the 17-year-old 7-footer from Japan who is barely 5-foot-9 but has talent we've never seen before in a basketball player. He's the unknown foreign prospect to watch on Draft Night. Here's a video from an international tournament in which Hachimura takes on four players bigger than him. It's insane. He's got range and hops for his size. He's the rare 7-footer who is really tough and aggressive on the offensive end. He's not just the best 7-footer in college basketball. He's the best player in college basketball. (Seriously, here he goes up against some good players, and he has a bad-ass demeanor.) Hachimura is the closest thing to a 7-foot Rasheed Wallace that we've ever seen. He's always been a tremendous passer out of the post, but he's way above average as a shooter. He's the best center in college basketball. He has the best combination of size, quickness and shooting range of anyone. He can score over smaller centers, and he has the ability to knock down 3s with ease. Hachimura has elite physical tools. If he had a third gear, he'd be unstoppable. He has a ton of potential.
