### **Tulip Chain**

This is a small Java utility to view the content of dmoz.org. How does this work? It looks up the dmoz.org domain and gets the JSON-formatted results. It parses these results, showing the categories, sub-categories and links. Tulip Chain is not affiliated with dmoz.org and the content in the directory. It is a Java utility that uses the API to assist with categorization. Tulip Chain is copyright (c) 2014 Michael Williams, University of Waterloo, Canada. This java script should be working. Please try copying this line of code and seeing if you can access the page. If you get the javascript error: "getelementbyid cannot get the element from null object. Please try copying and pasting this line of code and see if you can access the page. A: The error: Uncaught TypeError: Cannot read property 'getElementById' of null And the fix: function viewdmoz(url) { var mywindow = window.open(url, 'dmoz', 'height=420,width=500'); mywindow.focus(); return false; } View Directory The above code works for me, I'm not sure if it is a caching issue. MacBSD: Announcing the release of macosx.10.5-amd64-10.4-SU

#### What's New In?

Tulip Chain is a Java utility that will enable you to view the open directory content for dmoz.org. You can choose the category to view and use the links listed there.
