AllowBlock is a parental control application that was developed with Internet safety in mind. It is a content filter that blocks or allows visiting selected websites in Internet Explorer. This makes it possible to block or allow visiting certain websites in Internet Explorer, which may also be started from a list of websites or a list of URLs or even in full URL address mode. AllowBlock is one of the best parental control applications that protects your children by blocking or allowing Internet access. Use this software to block websites that your children cannot see. Do not allow your children to access certain websites while you may want to monitor them. With this Internet safety application, you can easily block websites that your children do not want to be able to visit. Like a screen lock feature, you can block websites by text and words in URL, site control lists, site lists, categories or even by keeping the filters for complete URLs. You can put password protection mode and require a password if your children will use the Internet. At this point of time, AllowBlock does not track what websites that your children visit. This makes it possible to block banned websites in Internet Explorer or to allow websites that the children want to visit. If you set the settings of the content filters correctly, it will not remove the websites that the children are allowed to visit and this will not remove the websites that you want to block. As long as your children do not change the settings of the application, it will work as you want it to. All websites that your children visit will be logged in the application's list of websites. If you want to have more information, click on the log statistics button and get this information. Settings in AllowBlock: Content Filter: The settings of the content filters. Allow browsing of Websites from List: Allows browsing of websites on a list of websites. Allow browsing of URLs from List: Allows browsing of URLs on a list of URLs. Allow browsing of Complete URL: Allows browsing of complete web addresses. Allow blocking of Websites by words in URL: Allows blocking websites by words in URL. Allow blocking of Websites by Category: Allows blocking websites by category. Allow blocking of Websites by Site List: Allows blocking websites by site list. Allow blocking of Websites by Stop Words in URL: Allows blocking websites by stop words in URL. Allow keeping of the filters: Allows keeping the content filters. Protect Mode: It allows your children to access the Internet only on a

Download: What's New in v2.0: Added parental control feature to block websites based on URLs stop words or URL matching pattern. Added an option to block file downloads, and allow browsing only web addresses on the allowed list. Added an option to browse websites within a specified time interval. Added an option to create a special offline cache of website information for maximum speed of browsing. Added an option to run AllowBlock on Windows startup. Added options to password protect installation and uninstall. Added an option to display password text during install/uninstall process. Added an option to uninstall AllowBlock while Internet connection is connected. Better Interface and more User Friendly. A lot of Bug Fixes and Improvements. ... Security Feb 13, 2019 Freedom block security is a highly customizable parental control that was developed with Internet safety in mind. Its Internet content filter blocks or allows visiting selected websites in Firefox, Google Chrome, Microsoft Edge and Opera. One may create two lists of websites: allowed and blocked. If a website that user is about to visit is on the allowed list the browser seamlessly displays the contents of the webpage; if it is on a blocked list then the browser is forwarded to a blocked information page. Security can allow user access specific websites, websites on a whitelist or websites by stopping downloads. FTP, HTTP or SSH tunneling can be used to provide access over the Internet. An Internet Firewall can be

integrated to block any unknown incoming traffic. Password protection access mode and password protected uninstall features are included. <http>
