Multitasking applications allow you to run multiple programs in parallel, but that doesn't mean that they're the same. You should pay attention to the way you set up the multitasking application, and the way you use it. For example, you should always have a good reason to run two programs simultaneously, while you can get away with a single program, provided that you have a good reason. In this article, we will take a look at the best apps to use in conjunction with your particular multitasking application. This way you can get the best out of each of these programs, thus making your multitasking experience the best it can be. Best Multitasking Apps The first thing you should consider while working with your multitasking application is the desktop size. Every application has its own limit for desktop space, and you should never cross that line, as it's a waste of memory and resources. The desktop should allow you to work with one application at a time, so you should keep this limit in mind. Best Multitasking Apps Advanced Encryption Standard The Advanced Encryption Standard is an algorithm used to secure data. The idea behind this is that any information encrypted with the algorithm can only be read when it's decrypted. Furthermore, AES encryption is recommended by the NSA, as it's considered to be the most secure algorithm there is. Advanced Encryption Standard Besides encryption, the Advanced Encryption Standard (AES) has a few other advantages, including the ability to open or repair corrupted files. It's widely used by professionals for confidential work, and it can be used for smaller and larger files alike. Microsoft Office Just like the advanced encryption standard, Microsoft Office is designed to work with a secure environment, which means it's completely safe for sensitive information. It's a well-known fact that the National Security Agency recommends using this program, which is why it's the best option for your desktop space. Microsoft Office Office applications give you access to many tools, such as managing files and programs. That's not all, though. You can open or edit protected Word and Excel files, and you can even get rid of any clutter from the desktop. Popcorn Time You should never leave your computer unattended with a stream of movies or television series running, especially when it's time to work. That's why using a multitasking application is crucial.
