Highlights: A new school expansion over the past few years has come from private donations, but now the school needs much-needed funding and more space to expand in future years, parents said. Parents and community members were given a chance to share their opinions and discuss the fate of Franklin Preparatory School, which gained new life with an expansion in 2015. “As the parent of four children from the grade 6 to grade 12, I don’t know that there is anything that is more important than ensuring that our students reach their potential,” Pittsford resident and father of four Shawn Chell said. The school was founded over a century ago and now has about 170 students in grades 6 to 12. A growing population has meant more students and additional teachers, but the school only has about 7,000 square feet of space and has had to turn away interested students because of a lack of space. The school’s goal is to eventually raise \$4 million to build a new \$14 million school with 5,000 square feet of space — the average size of all of the local high schools. Franklin was assessed at \$1 million in 2011 and ran a deficit of \$30,000 that year. There was no assessment this year. The tax relief bill passed by the Assembly and the Senate earlier this year included \$40 million in cash, but that was not included in the initial bill. The school is currently housed in three buildings: the elementary school, the middle school, and the upper school. The school has also been discussing expansion with the town since about 2001, but the plan has run into challenges with public land ownership issues. “None of us would have ever imagined that we would be discussing a new school this quickly,” Chairwoman of the Board of Trustees Jennifer Browne said. “Things happen. The economy has changed. That is not where we are as a school. There is no question that we will be open for business in the fall. We will certainly be open for our kids to show up.” An important principle of the Franklin school community is their partnership with the town and within school district, and while the district has helped the school through some funding constraints, this year’s tax relief bill did nothing to address the school’s current need to expand. “Franklin school is a real home and that is reflected in the community and in the school

Brushes can be one of the most fun things to play with in Photoshop. You can use a variety of different-shaped brushes such as Round, Pencil, Blob, Hair, and even go beyond basic brushes with the Crop Tool and add a Waviness effect to them. What is a custom brush? Think of a custom brush as a brush that you can save and use later. This way, you can design a brush to your liking and use it in any future projects. You can add or remove details such as edges, tips and roundness, and also add or remove a Gaussian Blur effect to the brush. One of the best use of custom brushes is to create a brush effect like the ones in the image below. Though custom brushes are great, the challenge is the limitation of only using brushes you design. Some of the limitations include a limited amount of colors, the number of settings for a brush, and a limit on how many brushstrokes you can use in a stroke. To create your custom brush, follow these steps: 1. Open the Brush Tool 2. Choose a color for the brush tip - Dark gray or white seems to be the most common color. The color of the brush tip can be changed by clicking the Brush Tool Tip Details button. 3. Click "Edit" and then "Define Brush" to define the settings of your brush. 4. When you add a stroke, the number of brush strokes per stroke is called the Stroke Count. Depending on the type of stroke, the Stroke Count can be different, such as 10 or 12. 5. To add details to the brush, click on the little round shape with the down arrow under the Stroke Count to add new brush strokes to the brush. The number of brush strokes you can add is equal to the brush stroke count. 6. 7. The brush continues to grow while you work on it. If you accidentally add a stroke, you can erase it by simply clicking on the brush again. 8. The size of the brush can be modified by clicking on the little arrow on the top right of the brush or by using the Size slider. To remove a brush stroke, you can simply click anywhere on the brush. If you want to delete the entire brush, select it and press the Delete key. The brush size and stroke count are a major factor in
