## Adobe Photoshop CC 2015 Version 17 Crack + Free

\* \*\*Curves (effects):\*\* This filter allows you to change brightness and contrast by picking a particular brightness level and location to start the curve, adjust it along the vertical axis, and then finish the curve. Figure 2-1 shows the Curves dialog box with a curve started at -80. You start at -80 because this is the darkest point on the curve. \*\*Figure 2-1:\*\* Curves is one of the most popular filters in Photoshop. Photoshop's tools include many buttons that have filtering and smoothing effects, but the filter you want is Curves (see Figure 2-1). \* \*\*Levels:\*\* This filter is an absolute necessity when you're working with images that have multiple brightness levels or where multiple colors are blended together. You can use Levels to make the image lighter or darker, as shown in Figure 2-2. When you use Levels, first choose a color to set as the reference point. The Levels dialog box can become an eyesore if you're not careful. If you have a lot of images to work with, consider using an external editor such as Adobe Acrobat, and import only the images you need. That way, only the command windows for Levels will appear, and you can hide them. Also, be sure to hide the Background check box so you don't accidentally make a background when setting the color for Levels. \*\*Figure 2-2:\*\* The Levels dialog box may become a pain if you don't know what you're doing. \* \*\*Sharpen (effects):\*\* This filter automatically adjusts the sharpness of an image. To sharpen images, drag the Sharpen slider to the right (see Figure 2-3). You can also press F5 when you're on the dialog box for Sharpen or adjust the Sharpen Amount slider. \*\*Figure 2-3:\*\* Sharpen is one of the most popular effects in Photoshop. When you sharpen an image, the pixels that make up the image become more prominent, resulting in an image with a sharper look. Even though a sharp image may appear different than one with no sharpening, many times you can still see the difference. Photoshop has many different sharpening filters such as the Gaussian Blur filter (see Figure 2-4) that you can use to make the edges of text appear sharper. When you have a lot of text in an image, make sure to use the Smart Sharpen
