Gameplay is enhanced in FIFA 22 with movement-controlled ball physics, where players can now shift the ball left or right before a free-kick or throw-in. In addition, the ball will be more forgiving and aware of player movements, allowing the ball to be more efficiently

and accurately passed forward or backwards to players out of or near the area of play. Additionally, when players are taking a throw-in in a confined area, the advantage will be the closest player to the ball that will have an increase in accuracy. In addition, the touchline area will change to a square area where throws will be more likely to drop inside the area and will be less effective. Player controller sensitivity has also been improved. Players will be less affected by the ball and surrounding players, enabling players to play more aggressively without penalty. FIFA Pro

Clubs uses a wide array of data from real-world player's movements and players' on-ball actions to enable better strategy and tactics. It will also feature a new True Player model that represents the players using today's most advanced video analysis. The new True Player model will improve collision response for better visuals, reaction speeds and ball control. Additional improvements on player balance are made using the data recorded from players in real-life. Player attributes, such as sprinting speed, acceleration and jump height are enhanced using data collected from the

movement of real players. Weighing in on FIFA 22, FIFA 19 Technical Lead Matthias Rudy said, “In FIFA 19, we introduced a brand new control model for our players, and this year we believe we’ve improved on the system. We’ve introduced new player models and physics and made several changes to the player intelligence and balance.” “FIFA 22 is the most ambitious title in the FIFA series and we’ve made substantial improvements in every area including the physics, animation, player intelligence and simulation. This year, players will be running with improved

agility, will be more intelligent, faster and more agile on the ball. In addition, we've introduced a brand new True Player model that represents the players using today's most advanced video analysis," he added. Going into FIFA 22, fans can look forward to numerous gameplay improvements, including:
