On his return from a European tour in February, 70-year-old French composer Hugues Dufour was asked by record companies in this country about the possible release of his album *L'Oiseau de l'Isle* – a CD of music based on poems by Charles Baudelaire, created for a performance tour of Great Britain, to which he is planning to return next year. Dufour said “no” but it would not be much of a surprise if it turned out that the album, scheduled for release in February, is actually a live recording from one of his late-career British recitals. The French-born, London-based composer has long been a prolific and thoughtful performer. His music is often abstract, and there are connoisseurs of his work who prefer his recorded output to his live performances. Recitals in Great Britain have not figured in his recent touring schedule; indeed, last year at the beginning of the year Dufour travelled to India with a group of his admirers, but the first event in Britain to be announced was a concert of Dufour’s music at the Radcliffe Academy in Stratford on 25 February. That’s because Dufour and seven

What's New in the Sleep Preventer?

Disable and enable PC sleep mode with a simple click of a mouse. Leave workstation on when computer sleeps. Switching between waking up and leaving workstation on can be done. Turn off and on laptop without going into settings or rebooting the system. No performance impact. Easily switch between laptop running and silent. Can be set to wake on a timer No software installation required Temporarily prevent PC sleeping or hibernation In order to create a tool dedicated to temporarily disabling the sleep mode, Sleep Preventer uses a simple design. The user interface is clean and simple with a blue

and dark-blue color scheme. The Sleep Preventer main window is accessible through the big green "Start" button at the top, opening a menu that gives you access to three tabs. Icons associated with each tab can be easily changed with the Settings menu. The leftmost tab holds all of the settings; it offers up to four timer options, and let you choose between enabling or disabling display sleep mode. There are three more tabs displaying the full state of the application. At the top left, the "Status" displays information about the last sleep period and the time you're left to sleep. Below that, there's a row with the "Never" option you can use to permanently disable PC sleep. At the right, the "Screensaver" tab shows the screen that gets turned on after the computer restarts, whether you've allowed it to be active or not.
