Young Engineer is a project about building simple interaction between people. You can help people getting through the game or play with them. You can build a simple game in an educational and entertaining way. How to use the app: - just click on PLAY button and focus on one feature of the app (ex: play with people, chat, manage friends, share life

stories, etc) - click on a button or dropdown menu to switch the window to that feature - the game switches and updates automatically I would be really appreciate your feedback.

Thanks. If you like the game, please share it with your friends. :) S Super 3D Shooter - Touchscreen Breakout by Ilya Chernikov S Flashpoint 3D is a game based on a competitive 3D shooter. Each map contains 20 objects for players to interact with, some of which are explosive and dangerous. Players are tossed onto the map

where they must use a touch screen and a set of deadly weapons to eliminate all opponents in play. They earn points based on how quickly they eliminate their opponents. The player with the most points wins the round and the match. L

Loading... CPAE's new international learning curriculum is the first of its kind. It's a textbook curriculum, which offers students a carefully balanced choice of texts from leading names in academic publishing. As part of the new curriculum, the Board is publishing the CPAE Guide, a printed book, and also an online version of the Guide, which students can access via their devices. This is the first time that the CPAE has published

such a curriculum and it has been a great opportunity to partner with outstanding publishers, including Wiley, Taylor and Francis, Oxford University Press and Cambridge University Press, to bring new exciting opportunities to teachers and students globally. [Molecular analysis of the effects of Ca^{2+} and oxidative stress on osteogenesis using gene-edited cells]. Calcium (Ca^{2+}) can regulate the proliferation and apoptosis of osteoblast, matrix mineralization and bone

formation. The mineralization of bone is under a reductive stress environment, and its main antiselective properties are produced by reactive oxygen species (ROS). Osteoblast lines and mesenchymal stem cells (MSCs) can be easily expanded and subjected to large-scale production in vitro in cell factories. These cells are therefore attractive therapeutic targets for ectopic bone formation and in bone tissue engineering. In this study, we used Sox2-Cre
