Problems Faced By Statistics Students

Certain problems are faced by statistics students. First of all, the extraction of data from a wide range of sub-group or respondents can be a rather troublesome task. Selection of a proper group of people for conducting the statistical research is also a rather difficult task.

To get a proper outcome, the students should ensure that the sample size is large enough. Maintaining relevance while keeping the sample size large enough is a rather difficult task for students. The sample size should be closely associated with the type of study being conducted.

The advertisement features a blue-tinted background image of students in a classroom setting. A woman in a black blazer is pointing towards the camera. The creation of a proper survey design is also rather necessary. The data being used for the survey should be reliable. Students are utilizing survey data within surveys that are poorly designed and thereby getting results that are not pertinent. Thus, the decision-making is highly misconstrued as a result.

Another aspect that is rather difficult for the student is the representation of data on a graph. One of the most important aspects of statistics is graphical representations. Students struggle with graphical representation as it can be rather challenging.
