the only downside to all of this is that simcity 4 doesnt support a mouse. so, if your stuck on a console and all you have is a gamepad, you can be forced to play the game like a button masher. also, there is no tutorial, and this is probably one of the biggest turn offs for console gamers. on the plus side, this means that you can fully customize your cities,

since there are no menus to mess with and no tutorial to accidentally click on. this is the granddaddy of all simulation games. if you need to relax, or need to see how the real world would react to a disaster, this game is for you. theres no getting away from the fact that simcity is a simulation of the real world, and that means that theres a lot of things you can do. you can build from scratch,

evolve your city, or buy a city from the government, or join a city, and build from the ground up. that said, it takes a lot of patience and dedication to play, and theres a huge learning curve. theres also a huge turn off for me, that being the lack of a tutorial. there is no way to learn how to play this game without sitting in front of a monitor and pressing keys. what the hell is gameplay and why is

it important to simulation games? simcity 4 takes the simcity formula and blows it up. theres no building, no roads, no simulation of society, no simulation of real world disasters. its just simcity 4, and its about as difficult to play as the first simcity, but with a lot more buildings to mess with. you can also build on the fly, and the game is much more intuitive and user-friendly. and best of all, you dont

need any manual, and you
dont need a guide to learn
how to play the game.
theres also no pesky menus
to get in the way, just a lot
of editing. 5ec8ef588b
